What this standard covers

This standard specifies the method for the determination of the composite strength of liquid inks. This standard is applicable to the determination of composite strength after liquid ink is coated (or printed) on non-absorbent flexible substrates and composited with soft (such as films, aluminum foils) or hard composite materials (such as plastic sheets) through adhesives . This method can be referred to when measuring composite strength of other similar structures.

Document data

International classification (ICS): 87.080.

Chinese classification (CCS): A17.

Estimated length of the Chinese original: 4,496 words.
