### What this standard covers

This standard specifies the measurement method for stroboscopic (transient light modulation) of lighting products, including: evaluation parameters, measurement equipment, measurement conditions and measurements. This standard applies to laboratory and field measurements of stroboscopic (transient light modulation) of general lighting products such as integrated lamps, integrated modules, lamps and control devices. This standard does not apply to stroboscopic (transient light modulation) measurements of luminous products designed for colored light applications and flickering changes (such as camera flashes, warning lights, etc.).

### Document data

International classification (ICS): 29.140.40.

Chinese classification (CCS): K70.

Estimated length of the Chinese original: 16,198 words.
