What this standard covers

This standard specifies the appearance, number of joints and length of each section, width limit deviation, thickness and deviation, physical and mechanical properties and restricted substance limits of polyamide (nylon) films for lithium-ion battery packaging. It describes sampling, test specimens The standard environment for conditioning and testing, as well as the corresponding test methods, stipulates inspection rules, marking, packaging, transportation and storage. This standard applies to the production, inspection and sales of lithium-ion battery packaging films made from polyamide (nylon 6) resin as the main raw material, extruded by the flat film method and biaxially stretched.

Document data

International classification (ICS): 83.140.10.

Chinese classification (CCS): Y28.

Estimated length of the Chinese original: 10,197 words.
