What this standard covers

This standard specifies the technical requirements for energy consumption per unit product of pulp molding products, defines the scope of energy consumption statistics, describes the energy consumption calculation method, and specifies the requirements for energy-saving management and measures. This standard is applicable to the calculation and assessment of energy consumption per unit product of pulp molding products made by pulp molding, molding, drying and other processes, as well as energy consumption control of newly built and expanded enterprises (devices). This standard does not apply to the calculation and assessment of unit energy consumption of dry-molded and naturally air-dried (air-dried) pulp molded products, as well as the energy consumption control of newly built and expanded enterprises (devices).

Document data

International classification (ICS): 85.010.

Chinese classification (CCS): Y30.
