What this standard covers

This standard specifies the method for determining the peel strength of inks, including the principle, tools and materials, test conditions, test methods, precision, and test report. This document applies to the determination of peel strength of solvent-based, water-based, and energy-curing inks used in transfer and release applications. For other types of inks, the peel strength determination should refer to this document. This document does not apply to the determination of the composite strength of liquid inks.

Document data

International classification (ICS): 87.080.

Chinese classification (CCS): A17.

Estimated length of the Chinese original: 23,282 words.
