Foreword

QB/T 8193-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 September 2026.

Classification: ICS 97.020; CCS Y04.

1 Scope

QB/T 8193-2026 sets out general design requirements for household products made with older people in mind. It belongs to the group of standards on age-friendly design, and its subject is how everyday household goods are designed so that elderly users can use them. The document is general in character and is not tied to one product. It keeps to the subject given in its title and is classed among the other standards instead of being a specification for a single article.

Household product manufacturers, product designers, retailers, buyers and testing or certification bodies would use it. It is a voluntary standard, as the /T in the code shows. The Ministry of Industry and Information Technology issued it on 13 February 2026, and it takes effect on 1 September 2026. It is a new document and does not replace an earlier edition, so product teams will find it a fresh reference for the design of such goods.
