Foreword

QB/T 8197-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 September 2026.

Classification: ICS 61.080; CCS Y17.

1 Scope

QB/T 8197-2026 is the light industry standard for the sewing dispenser, known in Chinese as a glue dispensing machine for sewing materials. It is a machine that applies adhesive to the materials used in sewing and related stitching work. The document treats this equipment as a product and sets out the technical provisions that belong to it, giving makers and users a common reference.

It will be used by manufacturers of dispensing machines for sewing materials, by garment, footwear and other sewn-goods factories that operate them, by test laboratories and inspection bodies, and by buyers who want an agreed technical basis when ordering equipment. The standard is voluntary, as the /T in the code indicates, so it applies where the parties adopt it in a contract or where another rule refers to it. The Ministry of Industry and Information Technology approved and issued it on 13 February 2026, and it comes into effect on 1 September 2026. It does not replace an earlier edition.
