Foreword

QB/T 8210-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 March 2027.

Classification: ICS 71.100.01; CCS Y40.

1 Scope

QB/T 8210-2026 is a management standard that gives the specification for a quality traceability system for daily chemical products. A traceability system lets a producer follow a product and its quality information through the stages of its life, and this document deals with such a system for products like soaps, cleaning agents and personal care goods made by the daily chemical industry. It concerns how the system is organised and run, not the formulation of the products.

It is intended for manufacturers and brand owners of daily chemical products who build or operate a traceability system, for quality managers, for suppliers of traceability software and services, and for assessment bodies and buyers who wish to judge such a system. The standard is voluntary, as the /T in its code shows, and applies where companies, contracts or other rules adopt it. The Ministry of Industry and Information Technology approved and issued it on 13 February 2026, and it takes effect on 1 March 2027. It is a new document and does not replace an earlier edition.
