Foreword

QB/T 8212-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 September 2026.

Classification: ICS 97.200; CCS Y56.

1 Scope

QB/T 8212-2026 is the light industry standard for the hand-held cordless fascia impactor, a sports health auxiliary appliance. This is a hand-held device, powered without a mains cable, that applies rapid percussive action to the body and is commonly used for muscle recovery and relaxation. The document treats the appliance as a product and sets out the technical provisions that apply to it, so that makers and buyers share a single reference.

The standard will be used by manufacturers and importers of such devices, by test laboratories and certification bodies that assess them, by online and offline retailers who source them, and by purchasers writing supply specifications. It is voluntary, as the /T in its code shows, and applies where a contract, a customer or another rule makes it relevant. The Ministry of Industry and Information Technology approved and issued it on 13 February 2026, and it takes effect on 1 September 2026. It is a new document and does not replace an earlier edition.
