Foreword

QB/T 8213-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 September 2026.

Classification: ICS 97.200.20; CCS Y58.

1 Scope

QB/T 8213-2026 is the light industry standard for the xun, a traditional Chinese wind instrument, usually made of fired clay, that is blown to produce its sound. The document treats the xun as a musical instrument product and sets out the technical provisions that apply to it, so that makers and buyers of the instrument share one published reference.

It is relevant to makers of traditional musical instruments, to music shops and distributors, to schools, orchestras and performers who buy xun, to test laboratories and inspection bodies, and to purchasers who need an agreed technical basis for orders. The standard is voluntary, as the /T in the code indicates, and applies where a contract, a customer or another rule refers to it. The Ministry of Industry and Information Technology approved and issued it on 13 February 2026, and it takes effect on 1 September 2026. It is a new document and does not replace an earlier edition.
