Foreword

QB/T 8217-2026 is a recommended industry standard of the People's Republic of China in the Light Industry sector, approved and issued by the Ministry of Industry and Information Technology on 13 February 2026, with effect from 1 September 2026.

Classification: ICS 83.140.10; CCS G33.

1 Scope

QB/T 8217-2026 is the light industry standard for calendered unplasticized polyvinyl chloride (PVC-U) film for decoration. Calendering is a process in which the plastic is rolled into thin sheet, and the resulting rigid PVC film is used for decorative surfacing. The document treats this film as a product and sets out the technical provisions that apply to it, so that producers and buyers share one published reference.

The standard will be used by manufacturers of decorative PVC-U film, by furniture, panel and interior finishing companies that laminate or apply it, by test laboratories and inspection bodies, and by purchasers writing supply specifications. It is voluntary, as the /T in its code shows, and applies where a contract, a customer or another rule refers to it. The Ministry of Industry and Information Technology approved and issued it on 13 February 2026, and it takes effect on 1 September 2026. It is a new document and does not replace an earlier edition.
