1 Foreword

QX/T 334-2016 was issued by China Meteorological Administration on 29 September 2016 and has been in force since 1 March 2017.

The QX/T prefix marks a recommended standard. It is not law in itself: it becomes binding when a contract names it, when a regulation or a mandatory standard refers to it, or when a producer declares conformity with it.

The document runs to 7 pages in English translation.

2 Scope Preview

This standard specifies the general rules for the classification of high-impact weather conditions on high-speed railways, and the high-impact weather conditions that affect the operation of high-speed railways such as lightning, high winds, rainfall, snowfall (snowfall), low visibility, minimum temperature, freezing rain, and hail. Apply rules. This standard applies to high-speed railway operation meteorological support services.

QX/T 334-2016 falls under ICS 07.060, in the field of natural and applied sciences.

This catalogue holds 269 other QX/T standards in that field.

In this catalogue, QX/T standards carry edition years from 2001 to 2026.

3 About this standard

Issued by: China Meteorological Administration

English translation: about 7 pages

Chinese original: about 11,170 characters

4 Related standards

Standards on related subjects:

GB/T 33679-2017 - Technical safety requirements of rocket production for rainfall enhancement and hail suppression

GB/T 33673-2017 - Grade of horizontal visibility

DZ/T 0175-2014 - Specifications for Geological Mapping of Coal (1:50000 1:25000 1:10000 1:5000)

QX/T 344.4-2021 - Satellite remote sensing fire monitoring method - Part 4: Estimation of the area of the fire area

QX/T 344.3-2020 - Satellite remote sensing fire monitoring methods - Part 3: Fire intensity estimation

QX/T 344.2-2019 - The method of fire monitoring by satellite remote sensing - Part 2: Fire spot discerning

5 Classification and status

International classification (ICS): 07.060

Chinese Standard Classification (CCS): A 47

Prefix QX/T: recommended standard.
