1 Foreword

QX/T 363-2016 was issued by China Meteorological Administration on 12 December 2016 and has been in force since 1 May 2017.

The QX/T prefix marks a recommended standard. It is not law in itself: it becomes binding when a contract names it, when a regulation or a mandatory standard refers to it, or when a producer declares conformity with it.

The document runs to 8 pages in English translation.

2 Scope Preview

This standard stipulates the index and grade classification of the seven types of flue-cured tobacco meteorological disasters, including drought, cold damage, heat damage, locust plague, wind disaster, flood damage, and rain and sunshine. This standard is applicable to the monitoring, forecasting and assessment of meteorological disasters during the period from transplanting to maturity of flue-cured tobacco.
