4.9 Evaluation and the role of information processing technology
4.10 The relationship between the green supply chain management system standard and other management systems
Appendix A (Informative) Term Relationships and Diagrams
Reference

Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for Standardization Work Part 1: Structure and Drafting Rules for Standardization Documents" drafting:

This document is consistent with RB/T 089 "Green Supply Chain Management System Requirements and Guidelines for Use" and RB/T 090 "Green Supply Chain Management System General Principles of Performance Evaluation" and RB/T 088 "Guidelines for Auditing Green Supply Chain Management System" together constitute the standard system of green supply chain management system:

Please note that some contents of this document may refer to patents: The issuing agency of this document assumes no responsibility for identifying patents:

Introduction

As an effective means to improve corporate green management and solve corporate environmental pollution problems, green supply chain has been adopted by enterprises and government agencies:

widely adopted by organizations: In order to facilitate various organizations to use systematic methods to carry out green supply chain management work, it is combined with the existing quality, environmental Integrating with environmental management, a series of standards for the establishment of a green supply chain management system are proposed:

This document is the basis of a series of standards for the green supply chain management system: Each management system is based on the initial quality management system Therefore, no other management system has developed a specific basis or terminology standard: Considering the scope of the green supply chain management system the scope is different from other systems, and involves a large number of terms that are not specified and not involved in the management system standards: In order to unify the concept, Based on the standardization work and follow-up work, this document was formulated, but it did not stipulate all the basic concepts and principles, only emphatically put forward Parts that are different from GB/T 19000:

Terminology and basics of green supply chain management system

1 Scope
