**Green supply chain management system - General rules for
performance evaluation
(English Translation)**

Issued on: October 11, 2022

Implemented on: January 1, 2023

Issued by: National Certification and Accreditation Administration

Table of Contents

Preface	
Introduction	
1 Scope	
2 Normative references	
3 Terms and Definitions	
4 Evaluation Principle	
5 Evaluation indicators	
6 Evaluation process	
7 Evaluation methods and conclusions	
8 Performance Reporting	
Appendix A (informative) Green supply chain management system performance evaluation index system framework	
Appendix B (Informative) Examples of General Principles of Performance Evaluation in Industry Application	
Appendix C (Informative) Green Attributes of Products and Materials	
Reference	

Foreword

This document is in accordance with the provisions of GB/T 1.1-2020 "Guidelines for Standardization Work Part 1: Structure and Drafting Rules for Standardization Documents" drafting:

Please note that some contents of this document may refer to patents: The issuing agency of this document assumes no responsibility for identifying patents:

Introduction

This document is consistent with "Green Supply Chain Management System Terminology and Basics", "Green Supply Chain Management System Requirements and Guidelines for Use", "Green Supply Chain Chain Management System Audit Guideline constitutes a series of documents for the green supply chain management system: Among them, "Green Supply Chain Management System Requirements and Uses" "Guidelines" is a guiding technical document for organizations to implement this document, providing guidance for organizations to understand and apply this document:

The purpose of this document is to introduce performance evaluation in the process of establishing and implementing the green supply chain management system, so that the organization can clearly identify the consequences of system construction:

changes in environmental performance: This document is for organizations to measure the performance level of the green supply chain management system and improve the overall green supply chain management system:

It provides a framework and principled guidance for overall performance: Specific industries can formulate industry performance evaluations when carrying out performance evaluations of green supply chain management systems:

According to the industry characteristics, industry management requirements and relevant regulations, policies, standards, requirements of relevant parties, etc., select and determine according to this document the contents and weights of the evaluation indicators at all levels are carried out to carry out industry evaluation:

Conducting performance evaluation of green supply chain management system can help organizations:

---Identify and determine the supply chain links with important environmental impacts that need to be controlled;

---Establish green supply chain management benchmarks;

--- Evaluate management performance against selected indicators and benchmarks;

---Determine the areas and directions that green supply chain management needs to improve:

General rules for performance evaluation of green supply chain management system

1 Scope

This document defines the terms and definitions related to the performance evaluation of the green supply chain management system, and determines the performance of the green supply chain management system:

The principles and framework of the evaluation are given, and the evaluation process and related content are given:

This document provides general guidelines for the performance measurement and verification of an organization's (or part of) green supply chain management system: This document applies to Based on the evaluation of the performance of the green supply chain management system established in RB/T 089, it is applicable to all types of organizations and does not propose an absolute requirement for the performance of a green supply chain management system:

2 Normative references

The contents of the following documents constitute the essential provisions of this document through normative references in the text: Among them, dated references for documents, only the version corresponding to the date is applicable to this document; for undated reference documents, the latest version (including all amendments) is applicable to this document:

GB/T 24040 Environmental Management Life Cycle Assessment Principles and Framework
GB/T 33635 Green Manufacturing Enterprise Green Supply Chain Management Guidelines
RB/T 087-2022 Terminology and basis of green supply chain management system
RB/T 089-2022 Green Supply Chain Management System Requirements and Guidelines for Use

3 Terms and Definitions

The following terms and definitions apply to this document:

lifecycle

A series of successive stages in a product system from the acquisition of raw materials from nature or from natural resources to final disposal:

[Source: GB/T 24040-2008, 3:1] 3.2 green supply chain; GSC the organization takes sustainable development as its purpose, aims at optimal resource allocation and compatibility with the environment, and takes simplicity, efficiency and coordination as its basic principles:

In other words, within each stage or related stages of the full life cycle of its activities, products or services, a group of related parties related to the supply chain system:

[Source: RB/T 087-2022, 3:7:1] 3.3 Part of the management system, used for the management of relevant environmental factors in the green supply chain, the management of green attributes in products and materials, and the development of the supply chain environmental protection role of the organization and address organizational risks and opportunities:

[Source: RB/T 087-2022, 3:7:3] 3.4 the organization's intentions and directions related to the performance of the green supply chain management system formally proposed by the organization's top management:
