What this standard covers

This standard specifies the use of an indirect fluorescent antibody technique (IFAT) and polymerase chain reaction (PCR) detection of infectious spleen and kidney necrosis virus (ISKNV) approach. This standard applies to infectious spleen and kidney necrosis virus disease epidemiology, diagnosis, quarantine and monitoring. This standard can be detected, including the enlargement of the cells contain ISKNV virus, viruses, including real fine iridescent virus (RSIV), stone stretch iridescent virus (RBIV), Grouper iridescent virus (OSGIV), etc; but it can not detect the iris Other genera virus virus family.

Document data

International classification (ICS): 11.22.

Chinese classification (CCS): B41.

Estimated length of the Chinese original: 13,164 words.
