What this standard covers

This standard specifies the use of a glass capillary viscometer movement asphalt, paving the kinematic viscosity of the oil and emulsified asphalt method of distillation residue at 135°. Other substances may also be used to measure the viscosity at 6-100 000 mm²/s of. This standard may also be used at other temperatures, but the precision is measured dry asphalt condensed to a viscosity of 135 ?? determined.

Document data

International classification (ICS): 75.14.

Chinese classification (CCS): E43.

Estimated length of the Chinese original: 13,132 words.

Adopted international standard: ASTM D2170-1992, IDT.
