What this standard covers

This standard specifies the method of hydrocarbon samples measured by a high-voltage mass spectrometry. This standard applies to gas oil boiling ranges of 205 ~ 540 ?? in the saturated hydrocarbon fraction, and to determine which of the alkane, a ring naphthenic, naphthenic bicyclic, tricyclic naphthenic, tetracyclic naphthenic, rings ring Content alkyl, six ring naphthenes, single ring aromatics and other hydrocarbons.

Document data

International classification (ICS): 75.160.01.

Chinese classification (CCS): E31.

Estimated length of the Chinese original: 16,177 words.

Adopted international standard: ASTM D2786-1991 (1996), EQV.
