What this standard covers

This standard specifies the linear vibration at high frequencies using high-frequency linear vibration test machine (SRV) grease extreme pressure performance measurement methods. This standard is also applicable to the evaluation of liquid lubricant extreme pressure properties. This standard adopts the International System of Units [SI] units. This standard relates to certain hazardous materials, operations and equipment, but not for all safety related to this issue are recommendations. Thus, the user of this standard, should establish appropriate security measures, and to determine the scope of measures.

Document data

International classification (ICS): 75.100.

Chinese classification (CCS): E36.

Estimated length of the Chinese original: 8,857 words.

Adopted international standard: ASTM D5706-1997 (2002), MOD.
