What this standard covers

This standard specifies the use of gas chromatography to determine the content of trace oxygenated compounds in industrial carbon four olefins. This standard applies to the determination of trace amounts of dimethyl ether, methyl tert-butyl ether, methanol and tert-butanol and other oxygen-containing compounds in C4 olefins for industrial use. The minimum determination content is 0.0001% (mass fraction).

Document data

International classification (ICS): 71.080.16.

Chinese classification (CCS): G16.

Estimated length of the Chinese original: 8,867 words.

Supersedes the earlier edition SH/T 1483-2004; SH/T 1547-2004.
