What this standard covers

This standard specifies the determination of aromatic bromine index of potentiometric titration method. This standard applies to final boiling point of less than 288°C olefin containing trace amounts of aromatics sample, the sample should not contain the components lighter than isobutane. Determination of bromine index ranges 0mgBr/100g ~ 500mgBr/100g. This standard is not intended to illustrate the use of this standard with all relevant safety precautions. Therefore, the responsibility of the user of this standard to take appropriate safety and health practices and to ensure compliance with the relevant regulations.

Document data

International classification (ICS): 71.080.15.

Chinese classification (CCS): G16.

Estimated length of the Chinese original: 7,732 words.

Adopted international standard: ASTM D5776-2007, MOD.
