What this standard covers

This standard specifies the design principles and major technical requirements for the power center automation system project. This standard is applicable to the engineering design of a power center automation system that adopts a direct combustion method for the construction, expansion, and reconstruction of petrochemical enterprises and uses solid fossil fuels as fuel.

Document data

International classification (ICS): 25.040.

Chinese classification (CCS): P72.

Estimated length of the Chinese original: 28,245 words.
