### What this standard covers

This standard specifies the basic requirements for seismic isolation (vibration) technology in petrochemical engineering. This standard is applicable to the design, installation, testing and maintenance of seismic isolation and isolation of structures and equipment in petrochemical engineering with seismic fortification intensity of 9 degrees (0.4g) and below. It is also applicable to the vibration isolation of structures and equipment in petrochemical engineering. Design, installation, inspection, maintenance.

### Document data

International classification (ICS): 91.120.25.

Chinese classification (CCS): P72.

Estimated length of the Chinese original: 47,492 words.
