What this standard covers

This standard specifies the process design requirements for safety relief facilities of petrochemical plants. This standard applies to the process design of the safety pressure relief facilities of petrochemical plants. It is not applicable to the safety of the pressure receiver chambers that are self-contained or used as components in power boilers, mobile pressure vessels, rotating or reciprocating mechanical equipment that are directly heated by flames. Process design of pressure relief facilities.

Document data

International classification (ICS): 13.240.

Chinese classification (CCS): P72.

Estimated length of the Chinese original: 44,420 words.
