What this standard covers

This standard specifies the airborne electronic equipment (hereinafter referred to as the device) using the Isolator Isolation System (hereinafter referred to as the system) design process, structure type and technical requirements. This standard applies to the isolator for airborne electronic equipment isolation system design, installation and installation of the bottom center. The device itself is regarded as the standard system to determine the load.

Document data

Chinese classification (CCS): L5821.

Estimated length of the Chinese original: 24,270 words.
