What this standard covers

This standard specifies the long-wave ground-wave field strength and the signal propagation delay is calculated. This standard applies to our long-wave radio system antenna excitation vertical electric field vertical component of the radio signal amplitude and propagation time delay calculations. Transmitting and receiving antenna phase center height of not more than one-sixth of the wavelength.

Document data

Chinese classification (CCS): M50.

Estimated length of the Chinese original: 18,123 words.
