What this standard covers

This standard specifies the soft soldering flux classification. Reasonable classification correctly use the flux of great significance to improve the welding technology. Flux specified in this standard classification according to their basic components, each type has to distinguish its active ingredients and chemical properties, on behalf of the chemical activity of the scope of the flux. Applicable to all industries design soldering flux material selection and technical staff in accordance with the scope of application.

Document data

Chinese classification (CCS): J33.

Estimated length of the Chinese original: 2,258 words.
