What this standard covers

This standard specifies the test requirements and general test methods for the basic performance of alkaline battery separators. Mainly include: appearance, dry thickness, wet thickness, quantitative, tightness, dry tensile strength, wet tensile strength, area resistance, alkali resistance loss rate, non-extrusion alkali absorption rate, expansion and contraction rate, suction Alkali speed (semi-permeable membrane), alkali absorption rate (microporous membrane), air permeability, maximum pore diameter, copper-iron content, and acetic acid binding amount.

Document data

Chinese classification (CCS): K82.

Estimated length of the Chinese original: 18,188 words.
