What this standard covers

This standard specifies the anti-static performance test methods for anti-static equipment and products used in the electronics industry. This standard applies to anti-static grounding systems, personnel grounding, workbenches, seats, storage cabinets, logistics vehicles, ionization static eliminators, work clothes, packaging materials and storage or Anti-static inspection and testing of various anti-static protective equipment and supplies such as turnover transportation packaging. Relevant tests in other industries can be used as a reference. The test methods specified in this standard are not applicable to the inspection of anti-static systems and products in flammable and explosive environments.

Document data

International classification (ICS): 33.100, 17.220.20.

Chinese classification (CCS): L06.

Estimated length of the Chinese original: 58,531 words.
