What this standard covers

This standard applies to electronic devices using magnetic or quasi-rectangular fixed magnetic core production surface mount inductors (hereinafter referred to as SM inductor). The inductor current through their terminals mounted on the hybrid circuit board or a circuit board. The purpose of this specification is to provide SM inductor priority ratings and characteristics, and from the SJ/T 2885 select appropriate quality assessment procedures, test and measurement methods, and gives general performance requirements.

Document data

International classification (ICS): 29.100.10.

Chinese classification (CCS): L17.

Estimated length of the Chinese original: 21,257 words.
