What this standard covers

This standard specifies optical and optical parameter measurement methods for eyeglass-type stereoscopic display devices using glasses as an auxiliary device. This standard applies to glasses-type stereoscopic display devices, and can be used as a method and basis for evaluating optical and photoelectric parameters in product design, development, and production. For the measurement methods of circularly polarized glasses and shutter glasses for stereoscopic display devices, see Appendix A and Appendix B.

Document data

Chinese classification (CCS): L47.

Estimated length of the Chinese original: 41,485 words.
