What this standard covers

This standard is based on an electronic design intellectual property (IP) quality metrics information model that specifies a standard XML format for representing IP quality information. The standard includes the XML schema and terms related to measuring IP quality and the quality of software executed in the system. The XML architecture and IP quality information model can focus on specific areas of interest to IP users. This standard applies to the "asynchronous" interface, for the "synchronous" interface can refer to the implementation.

Document data

Chinese classification (CCS): L55.

Estimated length of the Chinese original: 27,212 words.

Adopted international standard: IEC 62014-5:2015, IDT.
