What this standard covers

This standard specifies the energy consumption evaluation indexes, grades and calculation methods of push-plate electronic ceramic tunnel kilns. This standard applies to the electronic information industry in the production process of electronic ceramics and devices using continuous production of push-plate electronic ceramic tunnel kiln, the heating method is resistance heating, the firing temperature is 950°C~1450°C; The energy consumption level of the material during the firing process is calculated and rated, and the firing of other materials is only for reference.

Document data

Chinese classification (CCS): A92.

Estimated length of the Chinese original: 11,177 words.
