What this standard covers

This standard specifies the occupational classification and level, ability elements, ability requirements, evaluation requirements, etc. of Internet of Things practitioners. Based on the technical reference architecture, business form and application rules of the Internet of Things industry, it is divided into five types of job directions: Internet of Things systems, Internet of Things hardware and supporting software, Internet of Things application software, Internet of Things operations and services, and Internet of Things testing. On the basis of job division, according to the needs of the development of the Internet of Things industry and the objective laws of career development of employees, the job levels of employees are divided into three levels: primary, intermediate, and senior. According to the three dimensions of knowledge, skills and experience, the job competency elements of Internet of Things practitioners are stipulated. Grading and evaluating the practitioners according to the ability requirements, the evaluation results can be used as a basis for the ability training of
