What this standard covers

This standard specifies the measurement methods of ultraviolet radiation spectral distribution, irradiance and unevenness of ultraviolet irradiance in ultraviolet aging test chambers for photovoltaics, including term definitions, test environment, test equipment, test procedures, result processing and reports, etc. . It is suitable for the measurement of ultraviolet radiation spectral distribution, irradiance and ultraviolet irradiance unevenness within the (250-400) nm wavelength range on the specified test plane of the ultraviolet box.
