What this standard covers

This standard specifies the typical requirements, reference architecture, and implementation steps for connecting wind power equipment to the cloud via industrial internet platforms. It applies to wind power equipment manufacturers, power generation enterprises, and platform service providers involved in the deployment and implementation of such cloud connectivity, as well as in innovating management practices such as condition monitoring, fault early warning, remote operation and maintenance, and power output forecasting.

Document data

International classification (ICS): 35.240.50.

Chinese classification (CCS): L67.

Estimated length of the Chinese original: 14,145 words.
