What this standard covers

This standard specifies the typical requirements, reference architecture, and key steps for manufacturing enterprises to promote the clouding of on-site logistics equipment based on the industrial Internet platform. This standard is applicable to guiding domestic on-site logistics equipment manufacturers, leasing companies, and industry users to effectively organize and carry out on-site logistics equipment clouding work, and carry out a series of businesses such as status monitoring, fault diagnosis, operation and maintenance optimization, and energy consumption analysis. It is also applicable to providing on-site logistics equipment cloud solutions for industrial Internet platform service providers, universities, research institutes, and other units.
