What this standard covers

This standard specifies the four basic stages of demand analysis, model construction, model evaluation, and model improvement in the process of digital simulation modeling in the manufacturing industry, as well as the requirements to be followed in each stage, and gives the basic process for carrying out simulation modeling activities. This standard is applicable to manufacturing enterprises, research institutions, universities and third-party consulting service agencies, and can provide standard development and management processes for digital simulation modeling activities, and can also provide reference for the rating of digital simulation capabilities.
