What this standard covers

This standard specifies the framework for a physically layer-configurable reflective communication terminal, the structure and parameters of a programmable baseband processor, the configuration instruction set, and parameter determination rules. This document applies to the design and implementation of physically layer-configurable reflective communication systems.

Document data

International classification (ICS): 35.020.

Chinese classification (CCS): M36.

Estimated length of the Chinese original: 9,924 words.
