What this standard covers

This standard specifies the basic requirements and simulation methods for digital design telecommunications modeling of radar and similar electronic information equipment, including model composition, main functions, performance indicators, model parameters, input and output, modeling and simulation requirements, etc. This standard is applicable to digital design telecommunications modeling of radar and similar electronic information equipment, and other electronic equipment can also be used as a reference.

Document data

International classification (ICS): 35.020.

Chinese classification (CCS): L70.

Estimated length of the Chinese original: 15,114 words.
