SN

**INDUSTRY STANDARD OF THE
PEOPLE'S REPUBLIC OF CHINA**

SN/T 0001-2016

Replacing SN/T 0001-1995

**Rules for standards of physical and chemical analysis method
for the determination in food and cosmetics for export**

出口食品、化妆品理化测定方法标准编写的基本规定

(English Translation)

Issued on: March 9, 2016

Implemented on: October 1, 2016

Issued by: General Administration of Customs

Table of Contents

Foreword
1 Scope
2 Normative references
3 Terms and Definitions
4 General requirements
5 Writing standard
5.1 Structure and Writing Sequence
5.2 Informational Overview Element
5.2.1 Cover
5.2.2 Goal
5.2.3 Preface
5.2.4 Introduction
5.3 Normative General Elements
5.3.1 Standard Name
5.3.2 Range
5.3.3 Normative references
5.4 Normative Technical Elements
5.4.1 Terms and Definitions
5.4.2 Method Summary
5.4.3 Reagents and Materials
5.4.3.1 General requirements
5.4.3.2 Arrangement order
5.4.3.2.1 General
5.4.3.2.2 Products used in the market
5.4.3.2.3 Formulation solution
5.4.3.2.4 Standard titration solution
5.4.3.2.5 Standard solution
5.4.3.2.6 Indicator
5.4.3.2.7 Auxiliary material
5.4.4 Instruments and Equipment
5.4.5 Measurement Step
5.4.5.1 Extraction

- 5.4.5.2 Purification
- 5.4.5.3 Determination
- 5.4.6 Result Calculation and Presentation
- 5.4.7 Limit of quantification
- 5.4.8 Accuracy (Recovery)
- 5.4.9 Normative Appendix
- 5.5 Informative supplementary elements
 - 5.5.1 Informative Appendix
 - 5.5.2 Reference
 - 5.5.3 Index
- 5.6 Other rules
 - 5.6.1 Quantity, Units and Symbols
 - 5.6.2 Chemical Name
 - 5.6.3 Figure
 - 5.6.4 Table
- 6 Preparation of preparation instructions
 - 6.1 Task Source
 - 6.2 Significance and Characteristics of Standard Setting
 - 6.3 Basis for standard preparation
 - 6.4 The main process of standard setting
 - 6.5 Method Technical Demonstration
 - 6.6 Map
 - 6.7 Collaborative Experiments
 - 6.8 Summary of Solicitation
 - 6.9 Attachment Requirements
 - 6.10 Other issues that need to be explained
- 7 Standard Verification Requirements
 - 7.1 Validation Laboratory Qualification
 - 7.2 Validation Laboratory Selection
 - 7.3 Authentication Parameter Selection
- 8 Technical requirements for standard setting
 - 8.1 Qualitative Requirements
 - 8.1.1 Specificity
 - 8.1.1.1 Specificity of Residue Analysis Method
 - 8.1.1.2 Specificity of Component Identification Methods

8.1.1.3 Specificity of Content Determination and Impurity Determination Method

8.1.2 Detection limit

8.2 Quantitative Requirements

8.2.1 Limit of quantification

8.2.2 Accuracy

8.3 Precision

8.3.1 General Requirements

8.3.2 Expression

8.3.3 Repeatability Test

8.3.4 Reproducibility Test

8.4 Quantitative Methods

8.4.1 Standard Curve Method

8.4.2 Single Point Method

8.5 Additional Technical Requirements for Validation Methods

8.6 Robustness

8.7 Target Analyte Stability

8.7.1 General requirements

8.7.2 Stability of analytes in solution

8.7.3 Stability of Analytes in the Matrix

Appendix A (Informative) Food Category Regulations for Preparing Standards for Determination of Chemical Contaminants and Additives in Import and Export of Food

A.1 Classification Principle

A.2 Classification

A.2.1 Animal source food

A.2.2 Plant-derived foods

A.2.3 Processed Food

Appendix B (Normative) Additional Technical Requirements for Validation Methods

B.1 Additional Performance Standards and Other Requirements for Methods for Quantitative Analysis of Organic Residues and Contaminants

B.1.1 Performance Standards and Other Requirements for Chromatography-Mass Spectrometry Detection

B.1.2 Performance standards and other requirements for the determination of analytes by LC in conjunction with other detection techniques

B.2 Additional Performance Standards and Other Requirements for Chemical Element Quantification Methods

B.2.1 Atomic Absorption Spectroscopy (AAS) Requirements

B.2.2 Requirements for Flame Atomic Absorption Spectroscopy (AAS)

- B.2.3 Requirements for Graphite Furnace Atomic Absorption Spectroscopy (AAS)
- B.2.4 Specific requirements for hydride generation atomic absorption spectroscopy
- B.2.5 Specific requirements for cold vapor atomic absorption spectroscopy
- B.2.6 Specific requirements for inductively coupled plasma atomic emission spectrometry (ICP-AES)
- B.2.7 Specific requirements for inductively coupled mass spectrometry (ICP-MS)
- Reference

Foreword

This standard was drafted in accordance with the rules given in GB/T 1.1-2009.

This standard supersedes SN/T 0001-1995 "The standard for the preparation of standards for pesticides, veterinary drug residues and biotoxins in export commodities.

Compared with SN/T 0001-1995, the main technical changes of this provision, in addition to editorial changes, are as follows.

- This revision basically retained the core part of SN/T 0001-1995;
 - In the standard structure, SN/T 0001-1995 "6.4 Sampling and preparation of samples" was deleted, adding "orders" "terms and definitions" and "reference" three optional elements;
 - The scope of application of the standard is expanded except for the determination of pesticides, veterinary drug residues and biological toxins specified in SN/T 0001-1995 in addition to the preparation of standards, it also applies to standards for chemical elements, persistent environmental pollutants, food additives, and nutrient composition determination methods.
- Write (see Chapter 1);
- Changed SN/T 0001-1995 "3 Basic Requirements" to "4 Overall Requirements" and added "4.2 The formulation of this standard should be Meet SN/T 4530 requirements" (see Chapter 4);
 - In accordance with the provisions of GB/T 1.1-2009, combined with the actual needs of the SN standard, a more detailed description of the preparation of the various elements Provisions and examples one by one (see 5.2~5.5);
 - Increased specifications for quantities, units and symbols, chemical substance names, figures and tables (see 5.6);
 - Increased requirements for preparation of preparation instructions (see Chapter 6);
 - Increase the specification requirements for standardization, merge the contents of
