What this standard covers

This standard specifies the method for determination of petroleum fractions of olefin plus aromatic content. This section applies to the determination of gasoline, kerosene and other petroleum distillate olefin plus aromatic content, naphtha. This part is not used to determine the oil fraction containing butane and butene, and the 90% distillation temperature is higher than 315°C the sample.

Document data

International classification (ICS): 75.080.

Chinese classification (CCS): E30.

Estimated length of the Chinese original: 9,923 words.

Supersedes the earlier edition SN 0043-1992.
