What this standard covers

This standard specifies the method for the determination of iron ore, silicon, calcium, manganese, aluminum, titanium, magnesium and phosphorus content by wavelength dispersive X-ray fluorescence spectrometry. This standard applies to iron ore analyte concentration range.

Document data

Chinese classification (CCS): D31.

Estimated length of the Chinese original: 11,188 words.

Adopted international standard: ISO 9516-1992, NEQ; JIS M8205-1983, NEQ.
