What this standard covers

This standard specifies the total import and export of residual fuel oil in sediment Determination of Method. This standard applies to the determination of the distillate fuel containing residue fraction of total sediment matter to determine content of up to 0. 4% (m/m). Also applies to the determination of the maximum viscosity at 100 ?? 55 mm ^ 2/s (cSt) of the total residual fuel oil sediment was measured content of up to 0. 5% (m/m).

Document data

Chinese classification (CCS): E31.

Estimated length of the Chinese original: 8,887 words.

Adopted international standard: ASTM D4870-1996, IDT.
