Foreword

This standard is proposed and managed by the National Certification and Accreditation Administration.

This standard was drafted. Jiangsu Entry-Exit Inspection and Quarantine Bureau of the People's Republic of China.

1 Scope

This standard stipulates the determination of the quarantine method of ingress and exit oilseeds and the quarantine results.

This standard applies to the quarantine of inbound and outbound oilseeds.

2 Terms and definitions

The following terms and definitions apply to this standard.

Oilseed kernels for oil extraction other than soybeans, mainly including rapeseed, peanuts, flax, ramie, sesame, sunflower seeds, safflower seeds, mustard seeds and brown Oilseeds, etc.

3 Quarantine basis

3.1

China's entry and exit plant quarantine laws and regulations and related regulations.

3.2

Phytosanitary requirements for the country or region of entry.

3.3

Intergovernmental bilateral phytosanitary agreements,, protocols, memoranda.

3.4

Quarantine requirements as specified in the trade contract and letter of credit.

4 Quarantine preparation

4.1

For the documents of the exit oilseed, the quarantine requirements in the terms of the export contract (or letter of credit) shall be reviewed; the documents for the entry of oilseeds shall be reviewed.

A phytosanitary certificate issued by an official agency of the exporting country or region, and other due certificates and approval documents.

4.2

Understand the epidemic situation in the exporting country or region; understand the epidemic situation of oilseeds and the epidemic around the port of shipment; understand the importing country or region Quarantine requirements.

5 on-site quarantine

5.1 Quarantine tools

Specification screens, sample bags, oily markers, hand-held magnifiers, finger tubes, tweezers, utility knives and other on-site quarantine tools.

5.2 Vehicle quarantine

Transport vehicles carrying out oilseeds should be free of live insects, insect residues, animal and plant and their product residues, garbage, impurities, etc.

5.3 Outbound oilseed quarantine

5.3.1

Check the inspection form to verify whether the cargo space, steamed bread, size, quantity, quality and origin are consistent with the inspection content.

5.3.2

Conduct random inspection of the entire batch of goods. Inspect bags, stacking covers, bedding, and storage areas for pest infections. Pick Take the method of pouring the bag and

sieving, and carefully check whether there are any disease particles, bacillary dysentery, insects, weeds, and prohibited entry in the goods.

5.4 Entry oilseed quarantine

5.4.1

Oilseeds loaded on the entire ship should be quarantined at the anchorage.

5.4.2

After fumigation treatment, remove the fumigated medicine bag, ventilate and disperse the gas, and confirm the safety after the test is confirmed before the quarantine can be carried out.

5.4.3

No major epidemic situation was found in the surface quarantine, and the unloading was allowed. Each compartment is quarantined according to the upper, middle and lower floors.
