What this standard covers

This standard specifies the uncalcined or calcined petroleum coke, aluminum, barium, calcium, iron, magnesium, manganese, nickel, silicon, sodium, titanium, vanadium, zinc content by inductively coupled plasma atomic emission spectrometric method. This standard applies to the ash content of less than 1% of the uncalcined or calcined petroleum coke, aluminum, barium, calcium, iron, magnesium, manganese, nickel, silicon, sodium, titanium, vanadium, zinc content by inductively coupled plasma atomic emission spectrometry Determination.

Document data

International classification (ICS): 75.140.

Chinese classification (CCS): E44.

Estimated length of the Chinese original: 7,749 words.

Adopted international standard: ASTM D5600-1998, NEQ.
