What this standard covers

This standard specifies the inductively coupled plasma atomic emission spectrometry (hereinafter referred to as ICP-AES) determination of soluble coating of lead, cadmium, chromium and mercury content approach. This standard applies to coatings soluble lead, cadmium, chromium and mercury measurement, measuring range in Table 1.

Document data

International classification (ICS): 87.040.

Chinese classification (CCS): G51.

Estimated length of the Chinese original: 7,751 words.
