What this standard covers

This standard specifies the differential scanning calorimetry melting temperature and the import and export of chemicals melting temperature range approach. This standard applies to solid-liquid phase transition has obvious thermal effect of the chemical melting temperature and melting temperature range of measurement. This standard does not apply to the decomposition temperature lower than the melting temperature lower than the melting temperature of the material and explosives.

Document data

International classification (ICS): 71.100.01.

Chinese classification (CCS): G04.

Estimated length of the Chinese original: 8,847 words.
