What this standard covers

This standard specifies several important transgenic plant lines specificity (transformation event-specific) detection methods. This standard applies to genetically modified corn (Btl0, Btl1, GA21, Mon810, Mon863, NK603, T25, TCI507), genetically modified soybean (GTS-40-3-2, A2704-12), genetically modified oilseed rape (RT73, T43, Ms8, Rf3), transgenic tomato (China Fan No. I) and transgenic potato (EH92-527-1) strains specific detection.

Document data

International classification (ICS): 67.040.

Chinese classification (CCS): X04.

Estimated length of the Chinese original: 14,140 words.
