What this standard covers

This standard specifies the old mechanical and electrical products, hinges, chrome, nickel, copper, antimony, cobalt, barium, cadmium, zinc, bismuth by inductively coupled plasma atomic emission spectrometric method. This standard applies to the old mechanical and electrical products of plastic and metal materials in the plating, chromium, nickel, copper, antimony, cobalt, barium, cadmium, zinc, bismuth determination.

Document data

International classification (ICS): 25.010.

Chinese classification (CCS): J04.

Estimated length of the Chinese original: 10,185 words.
